**Vancouver, B.C., Canada** —ImEX Systems Inc. ([www.thinkimex.com](http://www.thinkimex.com)), a Surrey B.C. -based technology company, announced today that it has developed an interface to an ADP Dealer Management System. The interface will be used for data exchange between the body shop management system and the dealer's main accounting system. It has been successfully tested and certified by ADP personnel, and is available for immediate delivery.

*"This interface will provide the missing link for many repair facilities operated by OEM dealers. As of right now, most of them have to double enter the data into the DMS after it has been processed by the body shop office. Our interface will eliminate that, allowing the shop to be more efficient and to increase the productivity to new levels"* said Woody Fic, president and CEO of ImEX Systems Inc. *"ImEX customers already enjoy one of the most progressive and technologically advanced shop management systems on the market today. The new interface will reinforce the company's position in the market place"*, he added.

### **About ImEX Systems Inc.**

ImEX Systems Inc. with head office in Surrey, British Columbia specializes in providing advanced technology solutions for automotive repair shops. Established in 1994, the company delivers broad portfolio of information technology, shop management systems, computer and network hardware, consulting and accounting services.
